The **Convertible™ H-250** multi-positional chair helps provide a no-lift solution for patient transfers in a safe, dignified environment for both patient and caregiver. Easily converting between a stretcher and an upright mobile chair in seconds, the **Convertible™ H-250** enables caregivers to comfortably transfer and transport a patient weighing up to 250 pounds. The **Convertible™ H-250** adapts from stretcher to transport chair with an infinite number of positions available, including recline, Tilt-in-Space and Trendelenburg capabilities. Design innovations include a fully adjustable headrest, heavy-duty steel frame, and optional scale to make weighing mobility-impaired patients easy, safe, and comfortable.
